SUMMARY

Computer Science and Engineering student with hands-on experience in Data Analytics, Full-Stack Web Development, and Generative AI. Skilled in Python, SQL, Excel, Power BI, React.js, Node.js, RAG, AI Agents, LangChain, LangGraph, and LLM-based application development. Experienced in data cleaning, visualization, REST APIs, AI-powered applications, document retrieval, embeddings, and vector-based search. Currently strengthening practical skills in Generative AI, Agentic AI, and Machine Learning through hands-on projects.

EDUCATION

B.Tech in Computer Science and Engineering Parul University CGPA: 7.5/10 +2 in Science National Infotech CGPA: 3.02/4	Expected Graduation 2027
--	-----------------------------

TECHNICAL SKILLS

Programming Languages: Python, JavaScript, HTML, CSS, SQL

Data Analytics: Microsoft Excel, SQL, Power BI, Data Cleaning, Data Visualization, Exploratory Data Analysis (EDA)

Web Development: React.js, Vite, Tailwind CSS, Node.js, Express.js, REST APIs

Database: MongoDB, Mongoose

AI & Generative AI: Generative AI, RAG (Retrieval-Augmented Generation), AI Agents, LangChain, LangGraph, LLMs, Embeddings, Vector Databases, Prompt Engineering, Google Gemini API, Agentic AI

Tools & Platforms: Git, GitHub, VS Code, Postman, LangChain, LangGraph

Deployment: Vercel, Render, MongoDB Atlas

PROJECTS

1. Creator Bridge - AI-Powered Creator-Brand Collaboration Platform | React.js, Node.js, Express.js, MongoDB, Google Gemini API

- Developed a full-stack web platform connecting content creators and brands for campaign discovery, applications, collaboration, and communication.
- Implemented email OTP authentication and JWT-based authorization with separate Creator and Brand workflows.
- Built creator and brand profiles, campaign creation, creator discovery, application tracking, private chat, and earnings management modules.
- Integrated Google Gemini API for AI-powered creator matching based on campaign requirements, creator niche, audience, and social reach.
- Developed an AI Campaign Generator that generates campaign titles, deliverables, target audience, creator requirements, and suggested budgets from a campaign brief.
- Deployed the application using Vercel, Render, and MongoDB Atlas with REST APIs for frontend-backend communication.

2. Gujarat & Kutch Weather Data Analysis | Python, Pandas, Excel, NASA POWER API, Google Earth Engine

- Collected and processed historical hourly weather data for Gujarat and the Kutch region using NASA POWER API and Google Earth Engine.
- Worked with key variables including temperature, dew point, precipitation, solar radiation, and wind speed.
- Performed data cleaning, transformation, and Exploratory Data Analysis (EDA) using Python, Pandas, and Excel.
- Created time-series visualizations and statistical charts to analyze temperature, rainfall, wind speed, and solar radiation patterns.
- Analyzed seasonal and temporal variations in weather parameters and identified trends across the dataset.
- Prepared structured datasets and visual insights to support weather pattern analysis and data-driven interpretation.

3. RAG-Based AI Knowledge Assistant | Python, LangChain, LLM, Vector Database

- Built a Retrieval-Augmented Generation (RAG) pipeline for retrieving relevant information from custom documents and generating context-aware responses.
- Implemented document loading, text splitting, embeddings, vector storage, and similarity-based retrieval.
- Developed a retriever pipeline using LangChain to connect vector search with an LLM for question answering.
- Worked with prompt engineering and contextual retrieval to improve response relevance and reduce reliance on model-only knowledge.

CERTIFICATIONS

IBM RAG and Agentic AI Professional Certificate — Coursera / IBM | September 2026

RAG, Agentic AI, LangChain, LangGraph, multimodal AI, tool/function calling, and multi-agent architectures. <https://coursera.org/verify/professional-cert/3l6PLEVZ0l82>

AI Foundations — Simplilearn — Certificate | September 2026
